

REQUEST FOR PROPOSAL (RFP)
Municipality of the County of Colchester
Parking Design - Fundy Discovery Site

RFP Issued: September 18, 2026

RFP Deadline: October 9, 2026 at 4:00 pm

ADDENDUM #2 - Issued October 2, 2026

Question: Is stormwater modeling and/or stormwater retention required as part of this project?

Answer: Stormwater management should be a consideration of the design, including determining if there should be any buried stormwater infrastructure in the parking lots, or if sheet-flow will be acceptable, along with any necessary stormwater management features. Designers are encouraged to approach stormwater management using low-impact development approaches and/or other best practices in sustainable design. A formal stormwater management plan will not be required, however the engineer should account for stormwater management in the design.

Question: Is assistance during the tendering period required as part of the scope of work?

Answer: Assistance during the tendering period is not required as part of the scope of work.

Question: Section 2.4 of the RFP references a “Topographic plan (AutoCAD) of a portion of the project area.” Does the provided topographic survey cover the full extent of the project area of interest? If not, could you please identify which areas within the project limits are not included?

Answer: The provided topographic survey does not cover the full extent of the project area of interest. See the drawing attached below. The Municipality has completed a topographic survey for “Area A” (see Addendum#1). The Consulting Scope of Services includes completion of a topographic survey of “Area B”.
